MOBILE MILLING OF RAILS

WORLD'S LARGEST SEA LOCKGATES IJMUIDEN

THE CHALLENGE

STARKON's client requested that we solve a height difference in several rail joints at the new lock gates in IJmuiden. The challenge again was time. We only had two days to prepare and perform the job after the first contact.

THE SOLUTION

STARKON is used to short time frames since we also have our accident recovery repair service. Therefore, fast shifting was not new to STARKON. We prepared and sent an experienced team with the right machines and tools to them.

THE RESULT

STARKON's team, together with "De Wiel Services", managed to complete the job on time. So, the construction project for this final phase regarding the world's largest sea lock gates could continue, and it will open for shipping in early 2022.
