

2022

INSPECTIONS

# TORQUE AND TENSIONING

## NOV SEVAN VEGA MAIN REEL

### THE CHALLENGE

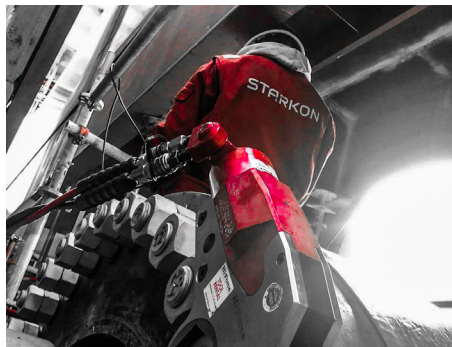

In 2022, we had the opportunity to carry out various torque and tensioning projects for multiple clients. These projects ranged from installing bearings using tensioning techniques to installing bolts for new construction projects. We also conducted regular inspections and checks of bolts to ensure their proper functionality and integrity. Our team was pleased to be involved in these diverse tasks, providing reliable torque and tensioning services to our valued clients.

### THE SOLUTION

Our team of well-trained torque and tensioning technicians thrives on the challenge of working at various locations for different clients. This requires adaptability, as each project may have unique requirements. While the job itself may involve repetitive tasks, our team remains attentive to ensure safety and maintain quality standards. With extensive experience in both offshore and onshore operations since 2010, our team has gained valuable expertise to successfully complete these assignments.

### THE RESULT

Despite occasional challenges and the possibility of setbacks, our team successfully managed to satisfy our customers and meet their expectations. We particularly noticed an increase in the demand for inspections throughout the year 2022. We take pride in our ability to address any issues that arise and ensure that our clients receive the quality service they deserve. Our commitment to delivering reliable and comprehensive inspections has contributed to our customers' satisfaction and trust in our services.
